

ASBESTOS ANALYSES

- Asbestos becomes a health risk when fibers are present in the air that people are breathing.
- Potential for causing diseases such as asbestosis, mesothelioma, and lung cancer.

Where Might Asbestos Be Found:

- Building materials such as cement, ceiling and flooring tiles, mastic, caulking, pipe and boiler coverings, insulation, roofing felt and shingles, and vermiculite.
- Houses built between 1930 and 1950
- Textured paints and wall and ceiling patching materials into the late 1970s.

ASBESTOS ANALYSES

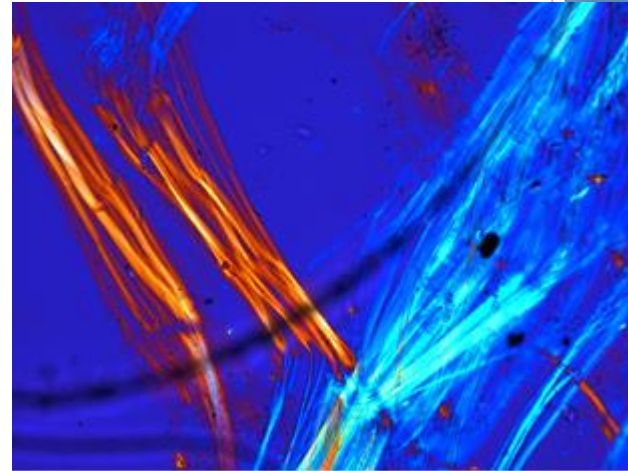

Our Analyses for Asbestos:

Polarized light microscopy (PLM)

-building materials or bulk samples

Phase Contrast Microscopy (PCM)

-air samples

Paracel offers quick turnaround times for our asbestos services, from same day analysis to 4 business days.

For more information on pricing and analysis time for your specific project, please call any member of the Paracel Service Team.
