

# FUNGAL ANALYSIS

- Moulds are fungi that grow in damp environments and can adversely impact indoor air quality
- Moulds can produce allergens, irritants, and potentially toxic compounds
- Exposure to moulds can produce effects that range from mild, such as sneezing and eye irritation, to severe, such as shortness of breath and asthma attacks

## How Paracel Can Help

- Identify and quantify mould by either direct examination under a microscope or by culturing sample on media
- Can test for mould on a variety of matrices including: air, bulk building materials, surface lifts, dust, and swabs
