

# 75 COMPOUND SCREEN

- Brand new screen for foreign chemicals and metabolites
  - 75 most common foreign chemicals such as:
    - PAHs
    - PBDEs
    - Pesticides
    - Parabens
    - PCBs
    - Phthalates
  - Unique for metabolites of glyphosphate and acetaminophen
  - Applicable for:
    - Preconception mothers
    - Adults with sensitivities
    - Post-natal infants
  - More affordable
  - More realistic analysis

LIFE SCIENCE FORENSICS

# 75 COMPOUND SCREEN

- Recent reports reveal the presence of dozens of toxic chemicals in Canadian adults and children, including heavy metals, pesticides, dioxins, flame retardants, and other persistent organic pollutants.
- While many chemicals are being monitored, the full extent of their potential for harm, especially in sensitive individuals, is still unknown.
- This screen shows what common pollutants exist in the body, focusing on broad chemical classes. Our specialists will work with you to determine future courses of action, following testing.
